Barriers to Rationalizing Charges

Hospitals Face Three Significant Challenges to Rationalizing Their Charge Structures.

Common Challenges to Rebasing Chargemasters

Medicare

- Cost Based Payments
- Weight Rebasing

Commercial

Charge Based Payments

Medicaid

Cost Based Payments

The taskforce is addressing the Medicare challenge to create an environment conducive to hospitals working with commercial payers and state Medicaid plans to rebase charges.

HFMA ChAMP Taskforce

The ChAMP Taskforce Aims to Eliminate the Use of Medicare Charges in Calculating Medicare Payments to Hospitals.

Taskforce Objectives

Develop alternative methodologies that reduce (or eliminate) the use of Medicare charges in determining Medicare cost-based payments and weight setting.

Resolve ancillary Medicare policy issues that pose a barrier to the elimination of charges in calculating Medicare payments.

Minimize Medicare payment redistribution between different types of hospitals (e.g. rural vs. urban) as a result of proposed alternative Medicare payment methodologies.

Collaborate with the Administration and CMS to implement the new payment and data submission methodologies.

The Taskforce Does Not Intend to Eliminate the Use of Charges for Other Payers or Self-Pay Patients.

Taskforce Participants

AdventHealth

Baptist Health

Baylor Scott & White

Health

Bon Secours Mercy

Health

Geisinger Heath

HCA Healthcare

Henry County Health

Center

Henry Ford Health

System

Mayo Clinic

Kaiser Permanente

VCU Health

Northwell Health

OSF HealthCare

Partners HealthCare

Sharp Healthcare

Spectrum Health

SSM Health

Agenda

Taskforce Background

Solution Overview

Implementation Requirements

Questions

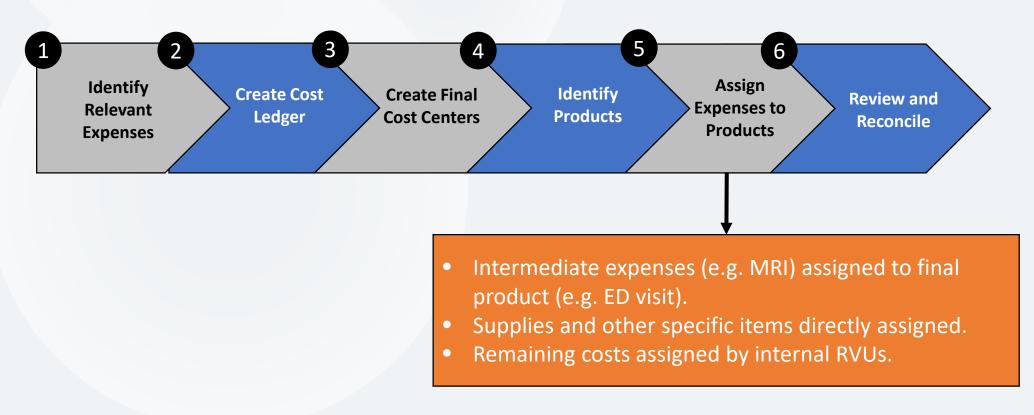

Appendix I: Cost Report Impact Mapping

Australian Solution?

Instead of Using Cost-to-Charge Ratios and Submitted Charges to Calculate Payments and Rebase DRG and APC Weights, Australian Hospitals Submit Their Cost Per Discharge or Outpatient Service.

Example: Australian Cost Finding Process

Similar Steps

The Medicare Cost Reporting Process Mirrors Many of the Steps in the Australian Cost Finding Process.

Example: Australian Cost Finding Process

Medicare Analog

F/S

Benefits

The Taskforce Believes Moving to a "Direct Cost Method" for Submitting Data to CMS Will Improve the Accuracy of Medicare Payments in Two Ways.

Resolve Timing
Issues Related to Using
Charges and CCRs from
Different Periods

Using the Actual Allowable Cost Per MS-DRG and APC Will Improve the Accuracy of Medicare Cost Based Payments and Weights by Fixing Issues Related to Timing and Charge Compression.

Statutory Authority

1) Inpatient Relative Weights:

- Established under section 1886(d)(4) of the Act
- Requires the Secretary "assign an appropriate weighting factor which reflects the relative hospital resources used...within that group compared to discharges classified within other groups"
- No requirement to use hospital charges to develop the relative weights

2) Inpatient Outliers:

- Section 1886(d)(5)(A)(ii) states "a subsection (d) hospital may request additional payments in any case where charges, adjusted to cost, exceed..."
- Congress's intent is to make inpatient outlier payments based on the discharge's cost, not charge.
- This proposal replaces a proxy for cost (billed charges multiplied by the RCC) with the actual allowable cost.

Statutory Authority - Continued

3) Inpatient New Technology Add-On Payment (NTAP):

- Established under section 1886(d)(5)(K)
- Requires NTAP if "estimated costs...for such service or technology..." exceed a cost threshold.
- No requirement to use hospital charges to develop technology's costs

4) Outpatient Relative Weights:

- Established under section 1833(t)(2)(C) of the Act
- Requires the Secretary to "establish relative payment weights...based on median (or, at the election of the Secretary, mean) hospital costs"
- No requirement to use hospital charges to develop the relative weights

Statutory Authority - Continued

5) Outpatient Outliers:

- Section 1833(t)(5)(A) states "The Secretary shall provide for an additional payment for each covered OPD service (or group of services) for which a *hospital's charges*, adjusted to cost, exceed...
- This proposal eliminates outpatient outliers and incorporates those dollars into APC payments.
- By using the word "shall" coupled with establishing a ceiling for outlier payments but not a floor for outpatient outlier payments, Congress provided the Secretary the latitude to not make outlier payments and return the dollars to the APC payment system.

Statutory Authority - Continued

6) Outpatient transitional pass-through payments for medical devices only:

- Section 1833(t)(6)(D) states "in the case of a medical device, the amount by which the hospital's charges for the device, adjusted to cost, exceeds..."
- Congress's intent is to make OP transitional pass-through payments for medical devices based on their cost, not charges.
- This proposal replaces a proxy for cost (billed charges multiplied by the RCC) with the actual device cost submitted on the claim using a value code.

Allocating Allowable Cost to Inpatient Cases: Hospitals with Costing Systems

- 1. <u>Identify Percentage of Allowable Costs to Allocate to Medicare Inpatient Services</u>: Using data from the hospital's cost accounting system, calculate the percentage of Medicare inpatient cost to the hospital's total cost. Multiply the percentage of Medicare inpatient cost times the total Medicare allowable cost from Worksheet B Part I. See slides that follow this section for an example.
- 2. <u>Calculate the MS-DRG Specific Allowable Cost Allocation Statistic</u>: Using data from the hospital's cost accounting system divide the cost per Medicare patient by the total Medicare inpatient cost.
- 3. <u>Allocate Allowable Cost to Each Patient Discharge</u>: Multiply the Medicare allowable cost related to Medicare inpatient discharges (step 1) times the patient specific cost allocation statistic in step 2. This will provide the patient specific cost per MS-DRG.

Apportioning Medicare Allowable Cost - Inpatient Hospitals with Costing Systems

| Difference | 1 | \$ | - | | \$ | - |

Allocating Allowable Cost to APCs: Hospitals with Costing Systems

- 1. <u>Identify Percentage of Allowable Costs to Allocate to Medicare Outpatient Services</u>: Using data from the hospital's cost accounting system, calculate the percentage of Medicare outpatient cost to the hospital's total cost. Multiply the percentage of Medicare outpatient cost times the total Medicare allowable cost from Worksheet B Part I. See slides that follow this section for an example.
- 2. Identify and Separate Internal Costs for Services Paid Based on APCs and Non-APCs: Using either internal data or by running claims data through an APC grouper, identify the internal cost associated with outpatient visits/services that have a single APC, multiple APCs, and are not paid based on APCs. Calculate the percentage of internal cost for Medicare single APC services as a percentage of total Medicare outpatient services.
- 3. <u>Calculate Total Allowable Medicare Cost to Allocate to Cases with a Single APC</u>: Multiply the amount calculated in step 1 (total Medicare allowable O/P Cost) by the percentage of internal Medicare cost associated with single APC services/visits calculated in step 2.

Allocating Allowable Cost to APCs: Hospitals with Costing Systems

- 4. Calculate the APC Specific Allowable Cost Allocation Statistic: For Medicare single APC services/visits calculate the total cost for each APC as determined by the hospital's costing system. For each APC divide the summarized total cost (for all "single" units provided) per APC from the hospital's costing system by the hospital's total Medicare outpatient cost for single APC claims based on its costing system (from step 2).
- 5. <u>Allocate Allowable Cost to Specific APCs</u>: Multiply the Medicare allowable cost related to single APC services/visits from step 3 by the APC specific allocation statistic in step 4.
- 6. <u>Calculate the Average Medicare Allowable Cost Per APC</u>: Calculate the average cost per APC by dividing the total allowable cost per APC (step 5) by the number of units per APC.

Note: Medicare Outpatient Outliers Would No Longer be Paid on Claims. Those Dollars Would Need to be Included in the OPPS Payments.

Apportioning Medicare Allowable Cost - Outpatient Hospitals with Costing Systems

Cost Based Payments: Modification Required

The taskforce identified five areas where Medicare charges are used to calculate cost-based hospital payments that require modification.

<u>Proposed New Payment Methodology</u>

| Payment Mechanism | Charges Currently Used | Proposed Resolution |
|--|--|--|
| Inpatient Outlier New Technology Add-On (NTAP) | Medicare, Patient Specific | Use a periodic interim payment based on the five-year average of outlier/NTAP payments as a cash flow mechanism. Calculates the actual outlier/NTAP payments for the fiscal year when the cost report is filed and is included as a settlement item. |
| Outpatient New Device Pass- Through | Medicare, Patient Specific | Include the cost of the device on the claim in a field associated with the pass-through device value-code. CMS can base payment off this amount. |
| CAH – Outpatient | Medicare, Patient Specific | Use APC based payments coupled with Transitional Outpatient Payments (TOPs) based on the prior year's cost report as a funds flow mechanism. Outpatient payments are cost settled when the cost report is filed. This interim payment process is currently used for qualifying cancer hospitals. Items not paid using the APC schedule would be based on the fee schedule and settled on the cost report. Beneficiary cost sharing for CAH's in the outpatient setting would be adjusted to the APC cost sharing amount. |
| Nursing/Allied Health DME Qualified Non-Physician Anesthesiologist Costs | Medicare, Summarized I/P and O/P from PS&R | Use overall Medicare cost allocation percentage for inpatient and outpatient services to calculate Medicare pass-though cost on worksheet D-4 that is transferred to worksheets E pt A and pt B. |

Cost-Based Payments: No Change Needed

While calculated using charges, the taskforce believes the following items do not require modification under the direct cost model.

Payment Items that Do Not Require Modification

| Payment Mechanism | Charges Currently Used | Proposed Resolution |
|--------------------------------------|------------------------------|--|
| Medicare UC DSH | Total Facility Charges | Remains unchanged as it uses the overall facility ratio of cost to charges and uncompensated care charges to calculate the cost of uncompensated care. |
| Organ Acquisition Ancillary Costs | Total Facility Charges | Continue using the total hospital cost to charge ratio and accumulated pre- transplant charges to calculate ancillary costs for organ acquisition/pre- transplant services. |
| Outpatient Outlier | Medicare Patient Specific | Changes are unnecessary. Taskforce recommends eliminating outpatient outlier payments and incorporating those dollars into APC payments through an adjustment to the conversion factor. |

Cost Based Payments: Not Charge Based

The following cost-based payments are not calculated based on charges and therefore do not require any change to accommodate the "direct cost model."

Cost-Based Payment Models that Do Not Require Retrofitting

| Payment Mechanism | Approach | Payment Source | Currently Cost Report Settled |
|---------------------------------------|-----------|---------------------------------------|-------------------------------|
| | | | |
| CAH - Inpatient | No-Change | Per Diem/Claims/Cost Report | Yes |
| Cancer Hospital Inpatient | No-Change | No-Change Per Diem/Claims/Cost Report | |
| Cancer Hospital Outpatient (APC/TOPS) | No-Change | Claims/Cost Report/PIP | Yes |
| Children's Hospital Inpatient | No-Change | Per Diem/Claims/Cost Report | Yes |
| Medicare Dependent Hospital | No-Change | Historic Rate/Claims/Cost Report | Yes |
| Sole Community Hospital | No-Change | Historic Rate/Claims/Cost Report | Yes |
| Organ Acquisition Routine Costs | No-Change | Per Diem/Cost Report/PIP | Yes |
| High Percentage ESRD Patients | No-Change | National Rate/Cost Report | Yes |

Hospitals without Costing Systems Proposed Transition

Key Transition Details: Hospitals without Costing Systems

| Item | Details |
|---------------------------------------|---|
| Timing: 3 Year Transition | Hospitals without costing systems would have a three-year transition period to develop the capabilities necessary to submit data under the "Direct Cost Model." |
| Process: | During the 3-year transition period, qualifying hospitals would continue to submit charges on Medicare bills. Cost based payments would continue to be calculated using billed charges and the CCR. MS-DRG and APC weights would be calculated using billed charges and the CCR. Beginning in year 4, hospitals must file their cost reports using the "Direct Cost" method. |
| Transition Resources Provided by CMS: | Minimally viable costing system for those without an adequate cost accounting system. APC grouper with capacity to re-process all outpatient claims from all hospitals without access to a costing system. |

Next Steps: Modeling

HFMA, with a Grant from the Robert Woods Johnson Foundation, Has Retained Wakely Consulting to Model the Direct Cost Method Using Data from Taskforce Participants.

Anticipated Outputs from Modeling

Calculate Basic Statistics

- MS-DRG based, Per patient, allocation statistics using internal cost data.
- APC specific allocation statistics using internal cost data.

Compare Cost Per Case

- Cost per case comparison of allowable cost using current and proposed cost finding method.
- Replicate and compare MS-DRG and APC weights*.

Analyze Payment Impact

- Outliers: Inpatient
- NTAP
- **CAH** Outpatient Payments

Agenda

Taskforce Background

Solution Overview

Implementation Requirements

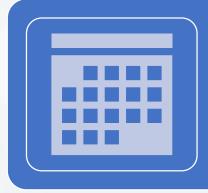

Questions

Appendix I: Cost Report Impact Mapping

Medicare Implementation Support: Tools

The program needs to provide participants with software utilities to implement the direct cost model.

Basic Cost Accounting Utility

 Minimally viable software as a service provided to hospitals that can't otherwise afford sophisticated cost accounting packages to accurately determine cost per discharge or service (HCPCS/CPT code) level.

APC Grouper

• Allows hospitals to reprocess claims through a grouper to assign APCs to outpatient visits/services for cost determination.

Medicare Implementation Support: Data

CMS will need to provide additional data, reconciliation instructions, and protect the confidentiality of hospital specific cost data.

- 1) <u>Detailed PS&R Inpatient</u>: Provide a detailed listing of patients, including an identifier (e.g. patient account number) the hospital can use to match the patient/discharge to the applicable discharge in the hospital's patient financial accounting system, who meet the definition of a Medicare patient for cost reporting purposes.
- 2) <u>Detailed PS&R Outpatient</u>: Provide a summary of APCs that includes the total payment and count of APCs paid. Include an identifier (e.g. patient account number) that can be used to match the patient/service back to the APCs included in the PS&R for cost allocation.
- Reconciliation Threshold: It will be challenging (if not impossible) to exactly reconcile data from both inpatient and outpatient PSRs to internal data due to timing issues. CMS will, with the help of the industry, need to develop a "reconciliation range" that if the hospital's case count is within this range it will be acceptable.
- 4) <u>Confidentiality of Cost Data</u>: All cost data submitted by participants to CMS as part of an allocation methodology must be held confidential like clinical lab private payer payment rates. If it is made available to the public or researchers, it needs to be released in a way that makes identifying the specific hospital impossible.

Medicare Implementation Support: Definitions

Clear definitions for the following items will need to be defined for purposes of implementing the direct costing model.

- 1) <u>A Medicare Patient</u>: HFMA's Workgroup suggests defining anyone who has Medicare as the primary payer (including those with exhausted eligibility) as a Medicare patient for the direct cost model.
- 2) <u>Final Costing Model</u>: HFMA's Workgroup suggests defining the "final costing model" as cost model for a given year that incorporates adjustments from the facility's annual audit of financial statements.
- Audit Criteria for Costing Models: Providing the cost per discharge or visit would not be overly burdensome. However, if providers were asked to provide revenue code level detail the volume of data required to be manipulated and sent would be prohibitive.

Medicare Implementation Support: Cost Report

The following changes to the Medicare Cost Report are necessary to implement the direct cost model.

Anticipated Cost Report Revisions

| Impacted Worksheet(s) | Change |
|--|--|
| • S-2 | Add question(s) related to the method hospitals use to allocate allowable cost during the transition period. |
| D Part II D Part IV D Part V D-2 Parts I – III D-3 | Each worksheet uses program charges from the PS&R multiplied by the CCR to determine allowable program cost. Replace the current RCC as the allocation statistic with the ratio of Medicare cost to total cost. See Appendix I for "downstream" impacts. |
| • E Series | Revise outlier settlement instructions in the Provider Reimbursement Manual to accommodate the new outlier payment methodology. Create settlement mechanism for NTAP payments. |
| New "Off Cost Report" Log | • Like bad debt, UC DSH, and DSH logs, create an "off cost report log" to submit detailed, per discharge or outpatient service cost from the hospital's cost accounting, create the allocation statistic, and calculate the Medicare allowable cost for Medicare patients. |
